Final Comments:

Examiner Signature: _____ Date: _____

This Examination is intended to assist a prospective purchaser, no warranties are made by the examiner. Examination is done at the request of, at the expense of, and for the use of the purchaser only. All comments, findings and recommendations made by the examiner are made in his opinion and to the best of his knowledge at the time of the examination. To avoid that attached stigma of "sound or un-sound" recommendations are made in regard to the use intended only, as a horse un-sound for one use maybe serviceably sound for another use. Many subtle internal medical, musculoskeletal problems are difficult to diagnose or will go unrecognized on our routine pre purchase examination. Recurrent colics, tying up, intermittent heaves, epistaxis, pregnancy, impaired vision, and subtle transitory lameness's are some of the occasional conditions missed on these exams. If the buyer has ridden the horse in the occupation and at the intensity it is being purchased for, many of the above conditions could be recognized or ruled out.
